

Victor H. Moll and Christophe Vignat
Generalized Bernoulli Numbers and a Formula of Lucas,
Fibonacci Quart. **53** (2015), no. 4, 349–359.

Abstract

An overlooked formula of E. Lucas for the generalized Bernoulli numbers is proved using generating functions. This is then used to provide a new proof and a new form of a sum involving classical Bernoulli numbers studied by K. Dilcher. The value of this sum is then given in terms of the Meixner-Pollaczek polynomials.
