Trevor McGuire
*Generalizations of the Periodicity of Certain Recursive Sequences*,

**Abstract**

In recent years, much research has been conducted in the area of random Fibonacci sequences. Recently, it was shown that some recursive sequences can be periodic, and occur as a subset of measure 0 of the set of random Fibonacci sequences. In this paper we will generalize those results to the case of \( n \)-nacci sequences and draw similar conclusions to the \( n = 2 \) case.
