## FIBONACCI SUMMATIONS INVOLVING A POWER OF A RATIONAL NUMBER <br> SUMMARY

BROTHER ALFRED BROUSSEAU
St. Mary's College, Moraga, California 94575

The formulas pertain to generalized Fibonacci numbers with given $T_{1}$ and $T_{2}$ and with

$$
\begin{equation*}
T_{n+1}=T_{n}+T_{n-1} \tag{1}
\end{equation*}
$$

and with generalized Lucas numbers defined by

$$
\begin{equation*}
V_{n}=T_{n+1}+T_{n-1} . \tag{2}
\end{equation*}
$$

Starting with a finite difference relation such as

$$
\begin{equation*}
\Delta(\mathrm{b} / \mathrm{a})^{\mathrm{k}} \mathrm{~T}_{2 \mathrm{k}} \mathrm{~T}_{2 \mathrm{k}+2}=\left(\mathrm{b}^{\mathrm{k}} / \mathrm{a}^{\mathrm{k}+1}\right) \mathrm{T}_{2 \mathrm{k}+2}\left(\mathrm{bT}_{2 \mathrm{k}+4}-\mathrm{a}_{2 \mathrm{k}}\right) \tag{3}
\end{equation*}
$$

values of $b$ and a are selected which lead to a single generalized Fibonacci or Lucas number for the term in parentheses. Thus for $b=2, a=13$, the quantity in parentheses is $3 \mathrm{~T}_{2 \mathrm{k}-3}$. Using the finite difference approach leads to a formula

$$
\begin{equation*}
\sum_{\mathrm{k}=1}^{\mathrm{n}}(2 / 13)^{\mathrm{k}} \mathrm{~T}_{2 \mathrm{k}} \mathrm{~T}_{2 \mathrm{k}+5}=(1 / 3)\left[\left(2^{\mathrm{n}+1} / 13^{\mathrm{n}}\right) \mathrm{T}_{2 \mathrm{n}+5} \mathrm{~T}_{2 \mathrm{n}+7}-2 \mathrm{~T}_{5} \mathrm{~T}_{7}\right] \tag{4}
\end{equation*}
$$

Formulas are also developed with terms in the denominator.
